

Moisture Minder® E-Drain Automatic Drain Valve P/N 143-0000

FOR COMPRESSORS UP TO 300HP

The Moisture Minder® E Drain is a standard Moisture Minder® Drain valve with a built in electronic timer. It is designed to work in applications where there is no pilot signal available.

Typical applications include:

- Rotary screw compressors
- Air dryers
- Aftercoolers
- Stand alone receiver tanks
- Piston compressors that run continually

All that is needed to operate valve is connect an air supply line to inlet of valve. Plug into a 115 volt receptacle. Connect water inlet of valve to vessel being drained.

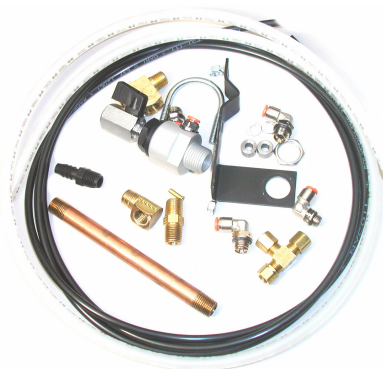

The timer is adjustable and can be set between 1 minute and 120 minute intervals. Each time the valve operates and internal pilot signal will be delivered to the Moisture Minder Drain Valve. This will cycle the valve in the same manor as pilot signal from an unloader would.
