

COVER YOUR BACKEND

PYTHON PUMP COVERS

Protect what matters most with today's most advanced concrete covers from Python Protective Sleeve + Covers.

Complex jobs combined with a demanding need to compress project schedules has fundamentally changed the way contractors place concrete. Consequently, concrete rig manufacturers have dramatically increased pump pressures in order to push concrete higher, further, and faster.

Python Covers put safety back at the forefront of pumping by reducing the risks associated with pipe blow-outs and slurry spatter. We've combined the best of ballistic technology with a user-friendly, universal design to protect your jobsite, equipment, and most importantly, your people.

EXPANDABLE BURST TECHNOLOGY

Python Covers proprietary technology is designed to distribute high pressure bursts through overlapping-pocketed material. Upon impact, internally tucked fabric releases; absorbing kinetic energy and ballooning the cover up to 30% of its original size.

COLLECT & CONTAIN

Python's non-breathable ballistic fabric captures debris, big and small, mitigating the risk of property damage. Once captured, covers are designed specifically to dump material in a safe location.

On line pumps and boom trucks, concrete is drained downward for clean up or recycling. In high-rise applications, placing system covers connect over pipe clamps and direct captured material from one cover to the next by use of gravity.

RUGGED SIMPLICITY

Cover your entire fleet with Python's universal transition elbow cover. This unique design is extremely pliable, diesel-repellent and provides stress-free part management to businesses of all shapes and sizes.

PROTECT, PUMP, REPEAT

COMMIT TO SAFETY

We understand the importance of safety in the workplace. That's why Python Pump Covers have been rigorously tested in simulated environments using today's most advanced high pressure pumps and systems.

Material:	Coated Ballistic Nylon
Closure:	Quick Clasp, All-Weather Metal Buckle
Temperature Range:	-60° to +250° F
Abrasion:	Meets or exceeds MIL-C-83489, MIL-STD 810F

EASY INSTALL

+WRAP

Install the Python Pump Cover to the corresponding backend or placing system with the arrows indicating the direction of flow.

+STRAP

Use quick-clasp straps to secure the cover over pipe. Placing line covers are designed to overlap one another and secure over each clamp section.

+SECURE

Secure the fully-adjustable outside straps on line pump and transition elbow covers.

SEE: Internally tucked fabric pops and expands upon impact allowing Python Covers to safely catch, contain, and collect concrete.

SIZING & ORDERING INFORMATION

BOOM TRUCKS

NAME	DESCRIPTION	ITEM #
Python Transition Elbow Cover	Fits most makes and models	PY-TEC

LINE PUMPS

NAME	DESCRIPTION	ITEM #
Python Line Pump Elbow Cover	Fits standard long radius / lazy elbows	PY-LPC
Python Line Pump Transition Cover	Fits 90° elbow and line pipe/reducer	PY-LTC

PLACING SYSTEMS

NAME	DESCRIPTION	ITEM #
Python Placing System Line Cover	12' overlapping cover for 10' pipe & clamps	PY-PSC
